## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6 and 13, drawn to a control system having operator control interfaces, classified in class 700, subclass 83.
  - II. Claims 7-12 and 14-22, drawn to a plural load circuit with selectively connected loads, classified in class 307, subclass 29.
2. Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using the product because invention II only recites a smart power switch without stating how the smart power switch is to be used. The smart power switch has separate utility such as in any environment where a strip of power outlets can be used.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 2836

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
